

The 5th Joint Seminar on East Asian Social Seminar
Chung-Ang Univ. and Doshisha Univ.
2 Nov. 2013

Transition away from “the male breadwinner model”

a cross national comparison

Hiromi TANAKA
Doshisha University
PhD. candidate

Introduction

Introduction

Women
in labour
market

Work Life Balance

“The M-shaped curve”

of female labour participation

Western countries
1970s onwards
Overcame

Japan Korea
Present
Yet to overcome

The emblem of
underperformance in gender equality

Research objectives

- To what extent have these countries, which overcame the M-shaped curve, moved away from the male breadwinner model?
- How can Japan be positioned cross-nationally?
- What implications does this give to Japan's future paths?

Methodology

- 8 countries

Sweden France USA UK Germany Netherlands
South Korea Japan

- OECD Statistics (1980 – 2010)
 - female employment rate
 - full-time / part-time rate
 - gender wage gap
 - part-time rate by age
 - working hours (women & men)

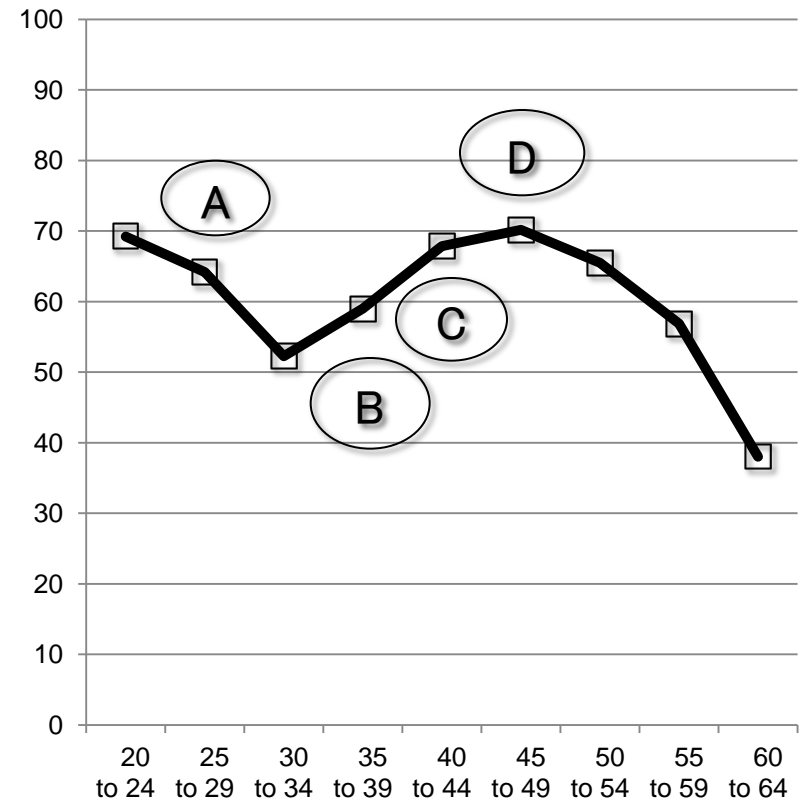

Methodology

The two points of comparison

- **Time**
 - when the M-shaped curve is overcome
 - 5 years later
 - 10 years later

(Japan & Korea: 2000-2010)
- **Age (see right →)**
 - 25 – 29 (benchmark): A
 - 35 – 39 : B
 - 40 – 44 : C
 - 45 – 49 : D

Compare part-time employment and working hours by age

Findings

Sweden France USA

- Overcoming of the M-shape: 1970s-1980s
- Female full-time employment : High
- Gender wage gap : Small
- Working patterns of men & women : Similar

Findings

Sweden France USA

Country	Time	Employment rate(%)	Full-time employment rate(%)	Gender wage gap(%)	Part-time employment ratios by age		
					25-29· 35-39	25-29· 40-44	25-29· 45-49

UK Germany Netherlands

Work-Life-Balance as political agenda

- Women reconcile work and family
- Men also targeted

“Combination Scenario” “the Dutch model”

- Share wage labour & care labour between men and women

⇔ Transformation cannot be found in the statistical data

Findings

UK Germany Netherlands

- Overcoming the M-shape : 1990s – 2000s
- Female part-time employment : High
- Working patterns of men & women : Different
- Women change working patterns in life course

Expected caring roles remain

even after overcoming the M-shaped curve

Findings

South Korea Japan

- Overcoming the M-shape : Not yet
- Gender wage gap : Large
- Working hours : Long
- Gap between full-time regular work
and part-time / temporary work

Findings

South Korea Japan

Country	Time	Employment rate(%)	Full-time employment rate(%)	Gender wage gap(%)	Part-time employment ratios by age		
					25-29·35-39	25-29·40-44	25-29·45-49

	2005	4.1	20.4	77.6
	2010	4.5	18.9	75.9

Source) OECD, *Employment and Labour Market Statistics (database)*, 2010

Findings

South Korea Japan

- Overcoming the M-shape : Not yet
- Gender wage gap : Large
- Working hours : Long
- Gap between full-time regular work
and part-time / temporary work

Peripheral & fragile female wage earners
Caring roles > Earning roles

Perpetuate “the male breadwinner model”

Discussion

<p>Group 1 1970s – 1980s</p>	<p>Sweden France USA</p>	<p>Enhanced female wage labour</p>
<p>Group 2 1990s – 2000s</p>	<p>UK Germany Netherlands</p>	<p>Not prominent female wage labour</p>
<p>Group 3 Yet to overcome the M-shape</p>	<p>South Korea Japan</p>	<p>Peripheral female wage labour</p>

Directions taken towards overcoming the male breadwinner model

Discussion

<p>Group 1 1970s – 1980s</p>	<p>Sweden France USA</p>	<p>Enhanced female wage labour</p>
<p>Group 2 1990s – 2000s</p>	<p>UK Germany Netherlands</p>	<p>Secondary female wage labour</p>
<p>Group 3 Yet to overcome the M-shape</p>	<p>South Korea Japan</p>	<p>Peripheral female wage labour</p>

Suggested policy directions for Japan

Reduce the gap between regular and irregular employment

- Security for irregular work
- Equal treatment between them

Expand the choice of working styles

- Work from home
- Flexible shifts between full-time & part-time

Suggested policy directions for Japan

Overcoming the M-shaped curve

Limited effect on the transformation
of gendered division of labour

Not the end of the process of the transition
away from the male breadwinner model

Conclusion

- Varying degrees of transition away from the male breadwinner model
- Group 2 countries as a more viable option for Japan
- A gendered division of labour could remain after overcoming the M-shaped curve

- The various methods to overcome the M-shaped curve
- More subtle differences between the countries of the same group

Further in-depth analysis:
policy development – gendered division of labour

fin.

Thank you
